

Storytelling with Data

Module 9: Frame the story – consumers and information graphics

Scott Spencer
Faculty and Lecturer
Columbia University

Agenda

Upcoming deliverable

Today's objectives

Considering uncertainty

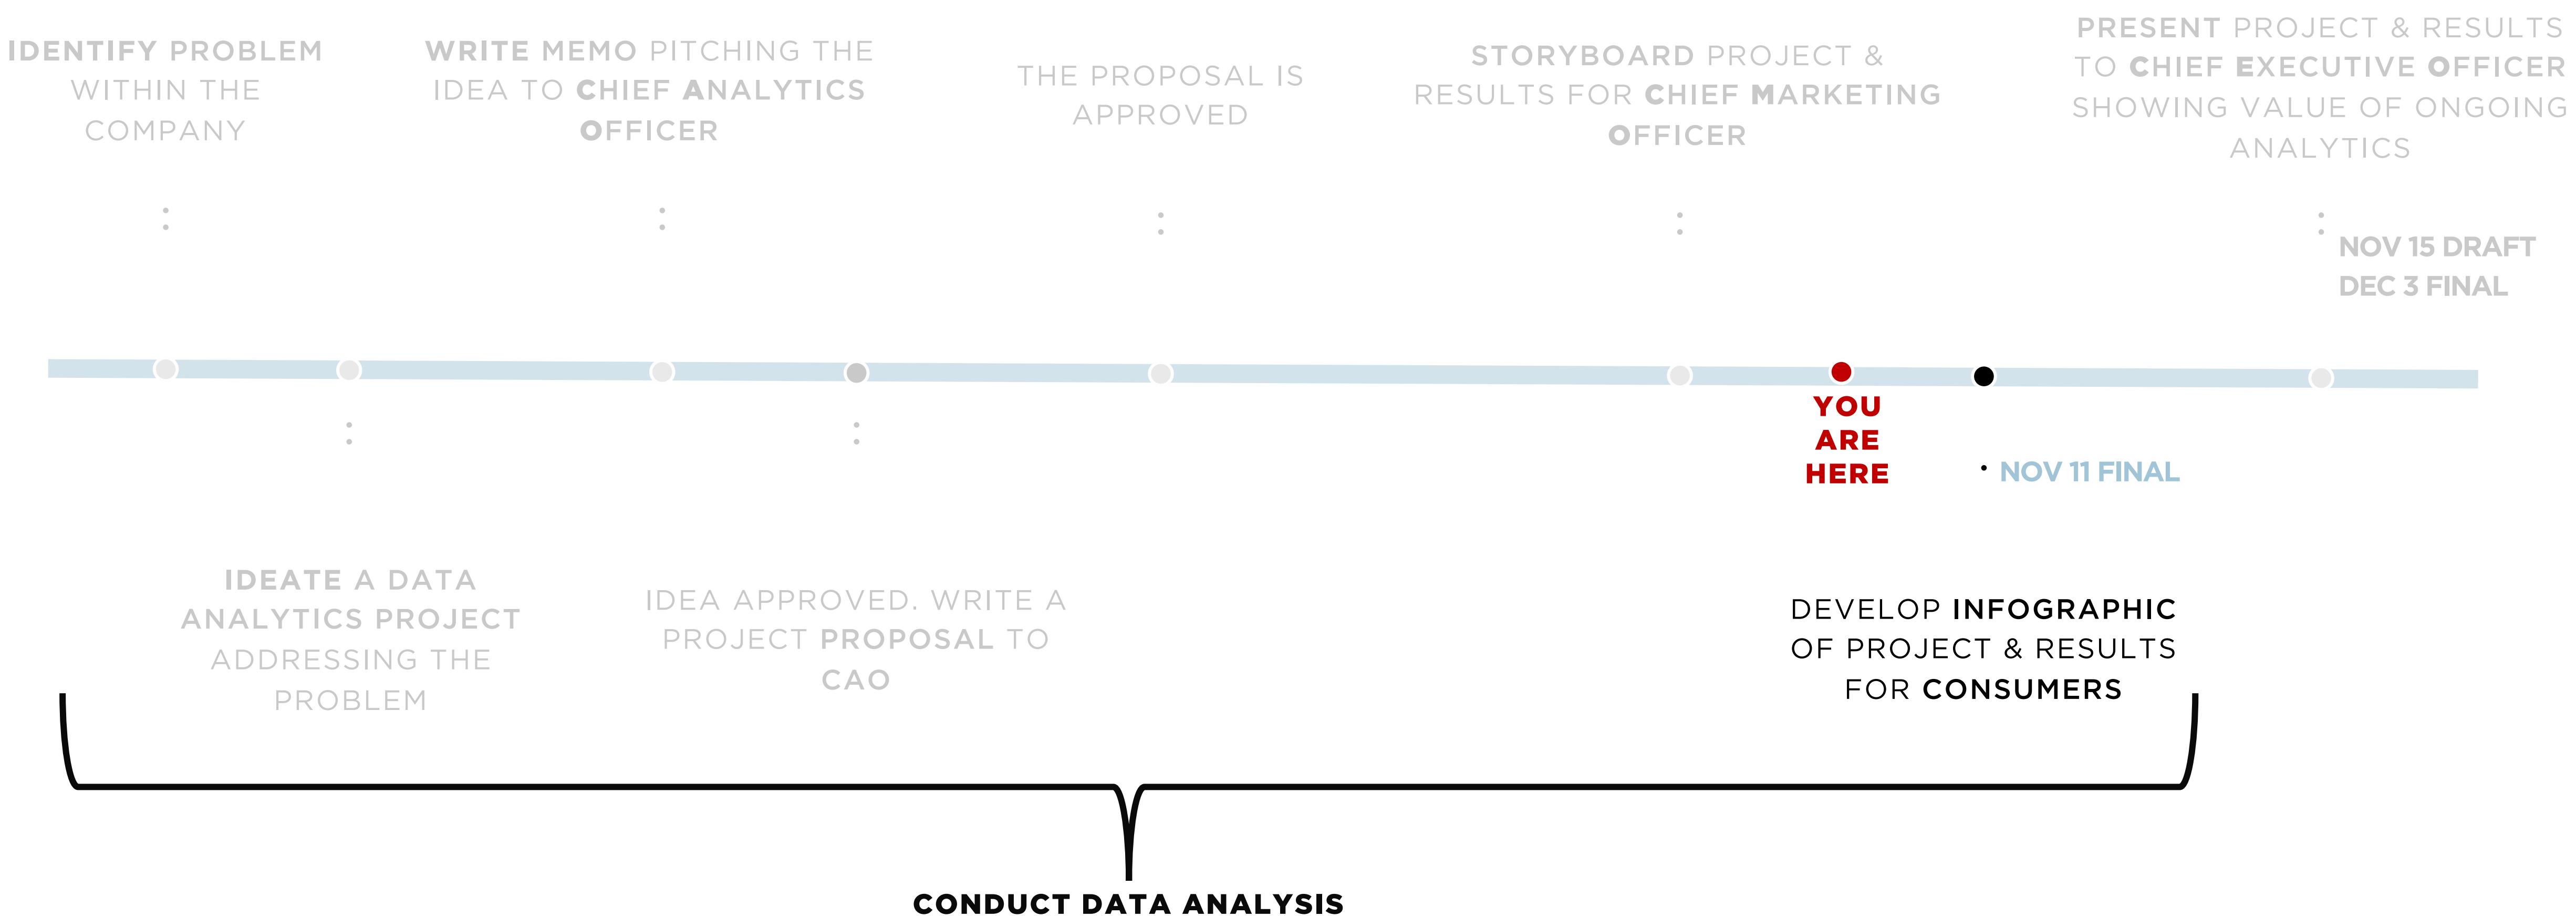

Information graphics

Questions or suggestions?

Upcoming deliverables

Upcoming deliverable

Information graphic – reframe your story, this time building off the messages you built for the marketing team in order to craft an infographic that displays the results of the analytic work in a way that is accessible, engaging, and exciting for a **general or consumer audience**.

Today's Objectives

Objectives

1

Communicating uncertainty
with data visualization

2

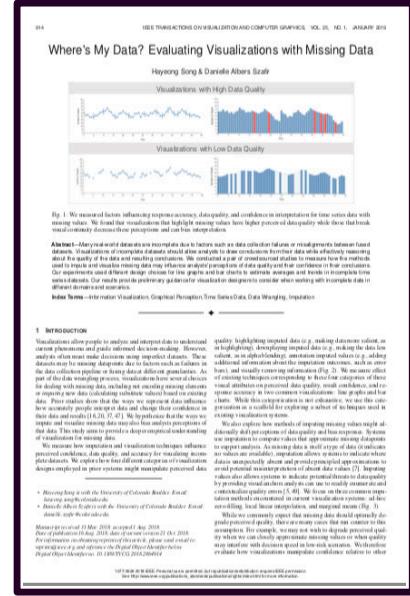

Use information graphics
to tell a story

Communicating uncertainty

Where's my data? Evaluating Visualizations with Missing Data

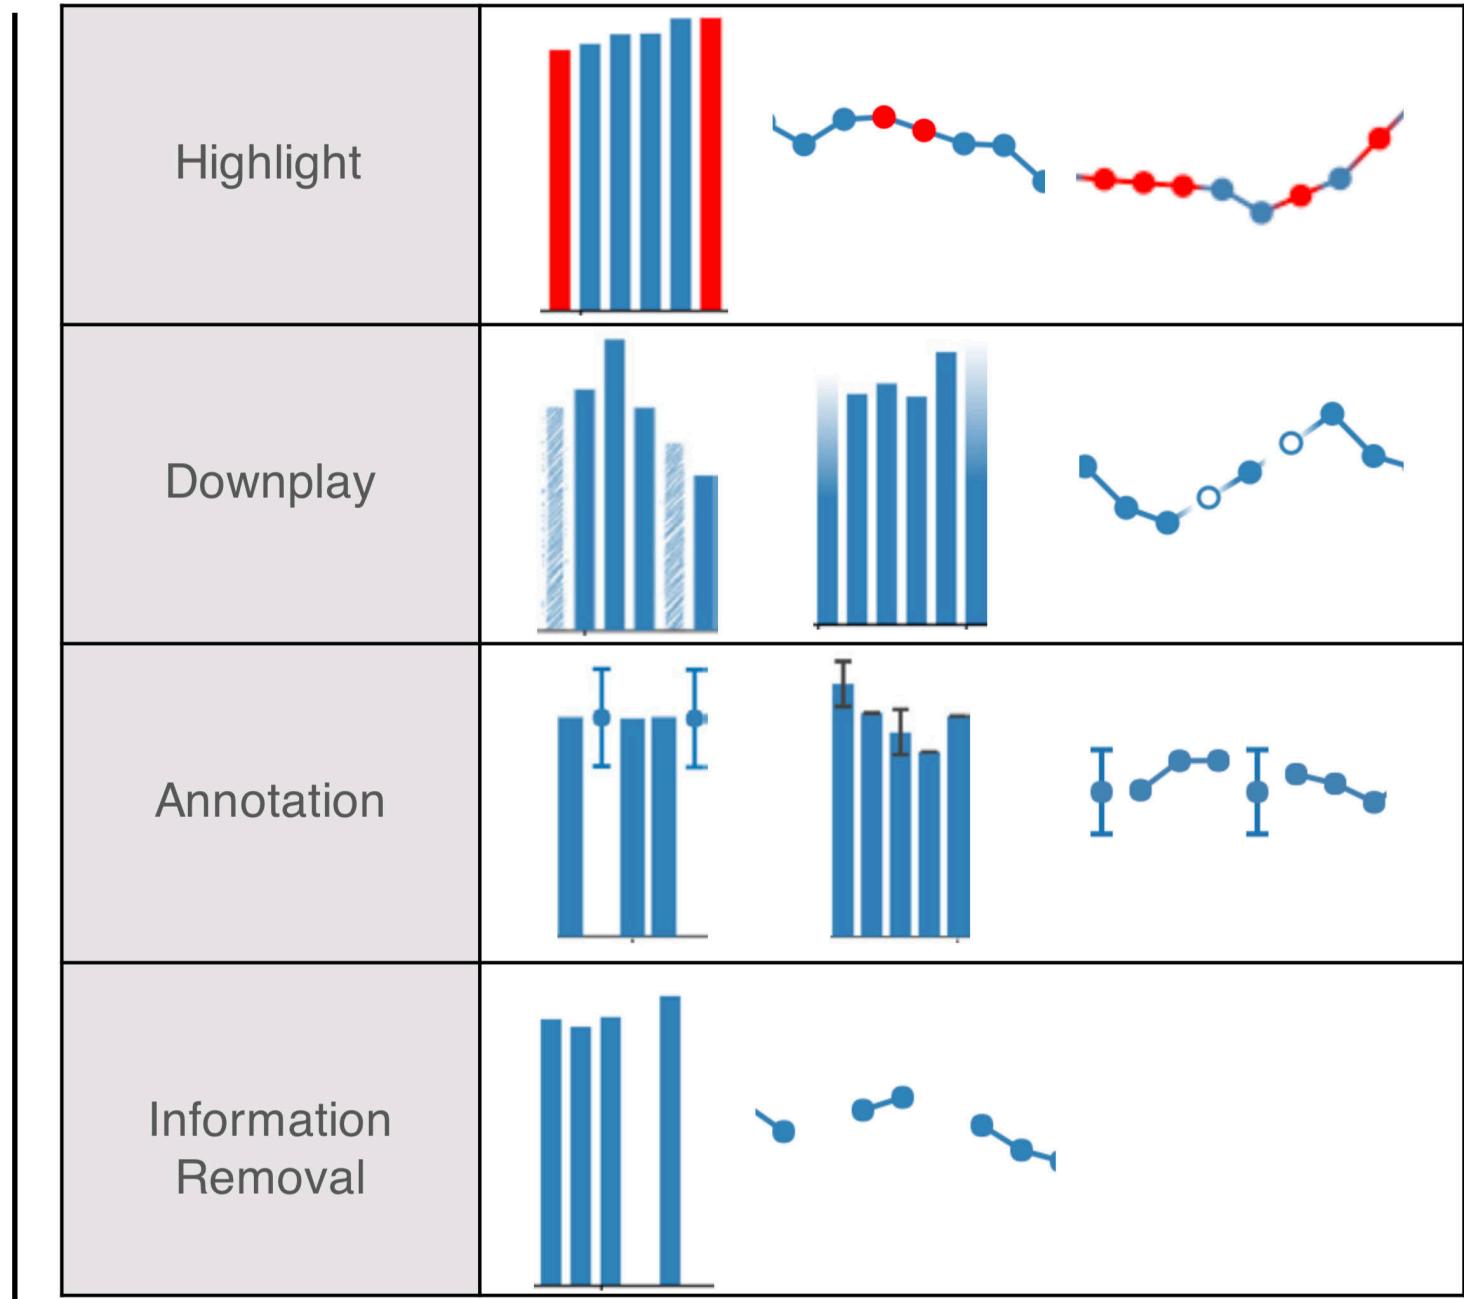

Song & Szafir

The authors were academics at the University of Colorado Boulder.

Visual choices for missing values on perception of data quality

Choice of missing-data visualization alters perceptions of data quality

Perceived data quality and confidence generally degrade as the amount of missing data increases.

Data visualized by **highlighting missing values** tends to be seen as **higher quality than downplay or information removal**.

Information removal can significantly **degrade** perceptions of data quality, and confidence. These methods even lead to incorrect responses if missing values break the visual continuity of a visualization.

Linear interpolation leads to **higher perceptions** of quality and confidence in analysis.

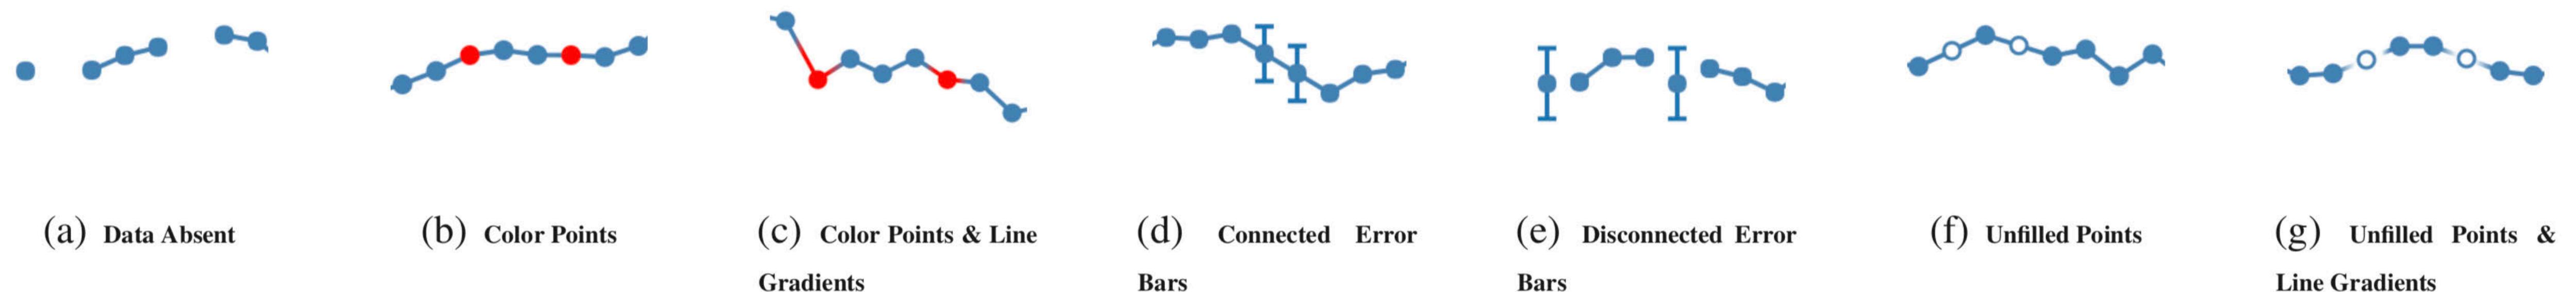

Fig. 4: We tested seven different methods for visualizing missing values in line graphs manipulating both point and line appearance: two highlighting missing values, two downplaying missing values, two annotating missing values, and one removing missing values. .

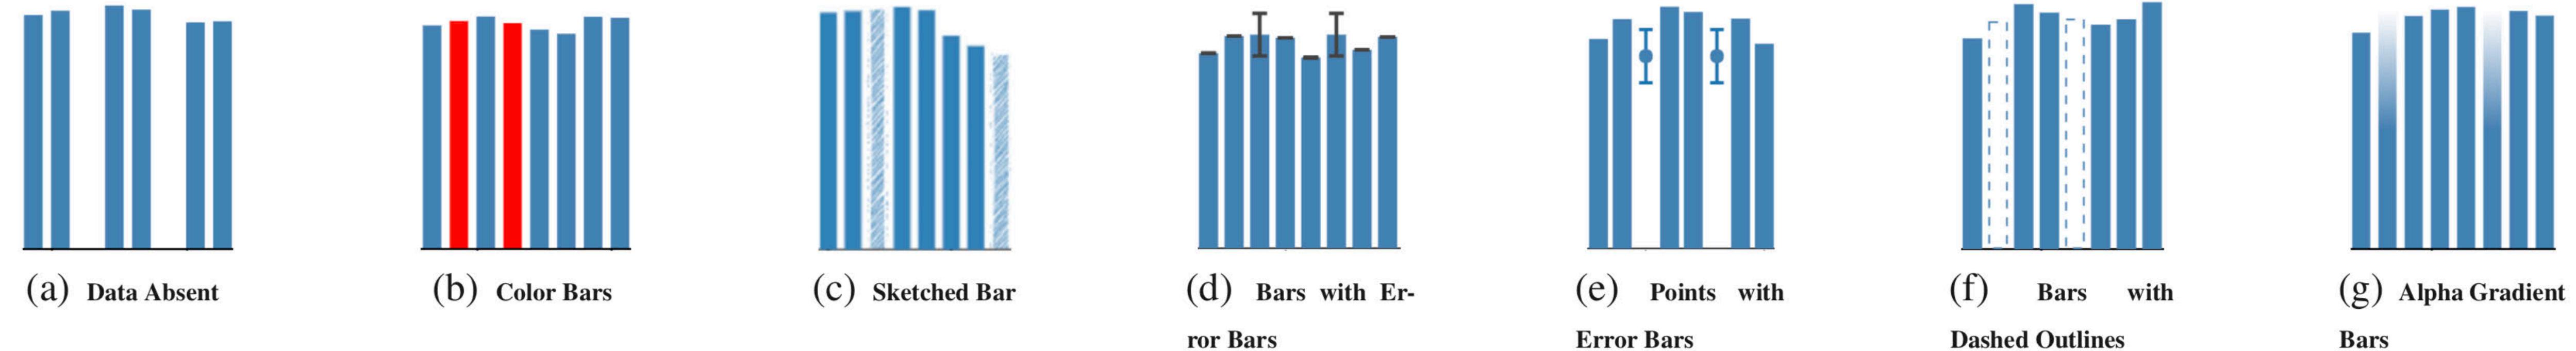

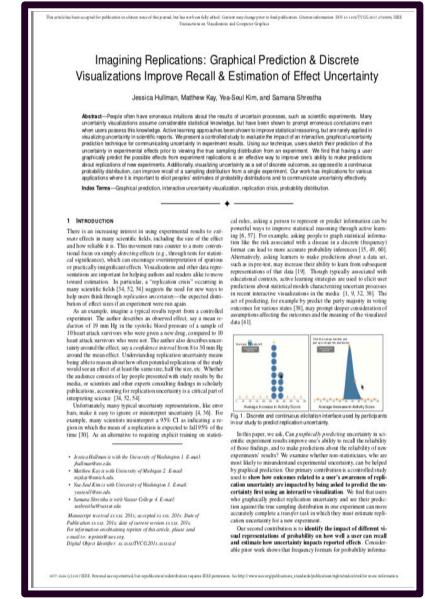

Fig. 6: We tested seven different methods for visualizing missing values in bar charts: one highlighting missing values, three downplaying missing values, two annotating missing values, and one removing missing values.

Imagining Replications

Hullman & co-authors

The authors are part of an academic group formally studying the perception of uncertainty, among other things.

Sketching perception of uncertainty before seeing results improves accuracy

Visualizing uncertainty as set of discrete outcomes improved recall

Crowd-sourced study that evaluated the impact of an interactive, graphical uncertainty prediction technique for communicating uncertainty in results. Users sketched their prediction of the uncertainty in experimental effects prior to viewing the true sampling distribution from an experiment.

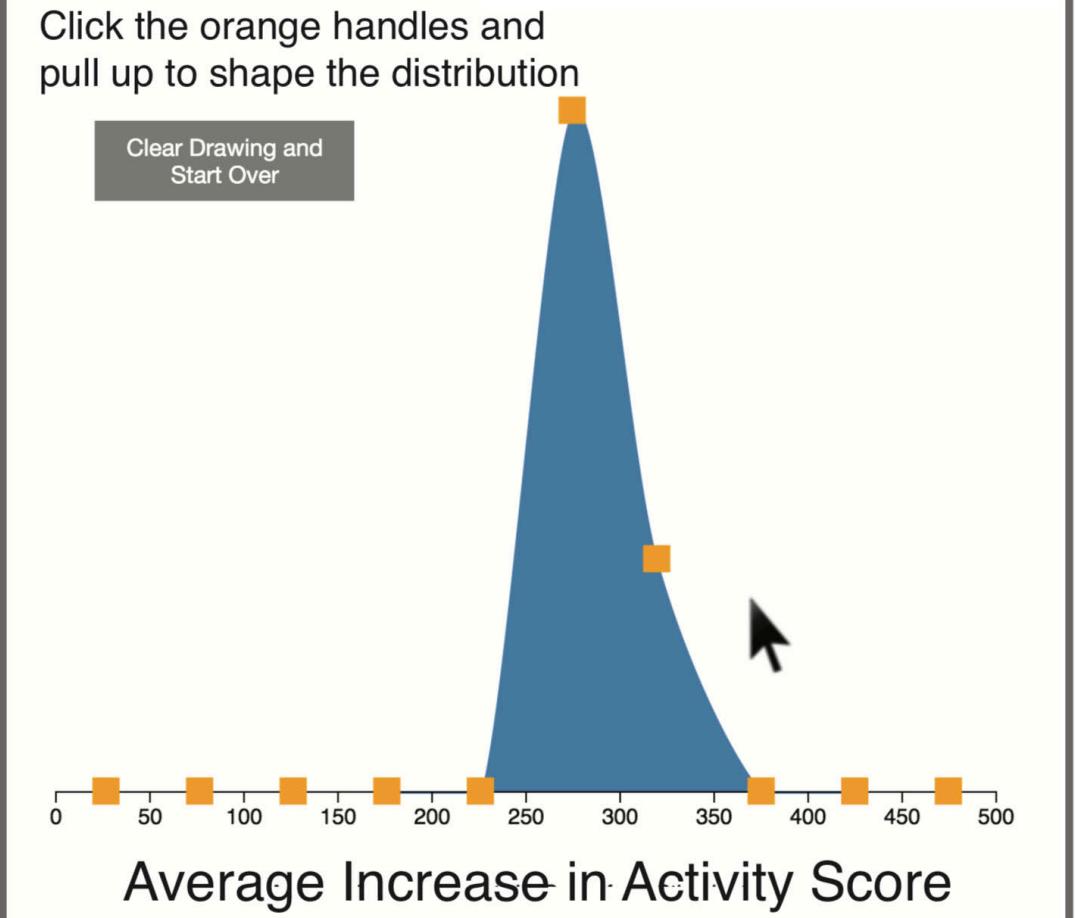

Fig. 1. Discrete and continuous elicitation interface used by participants in our study to predict replication uncertainty.

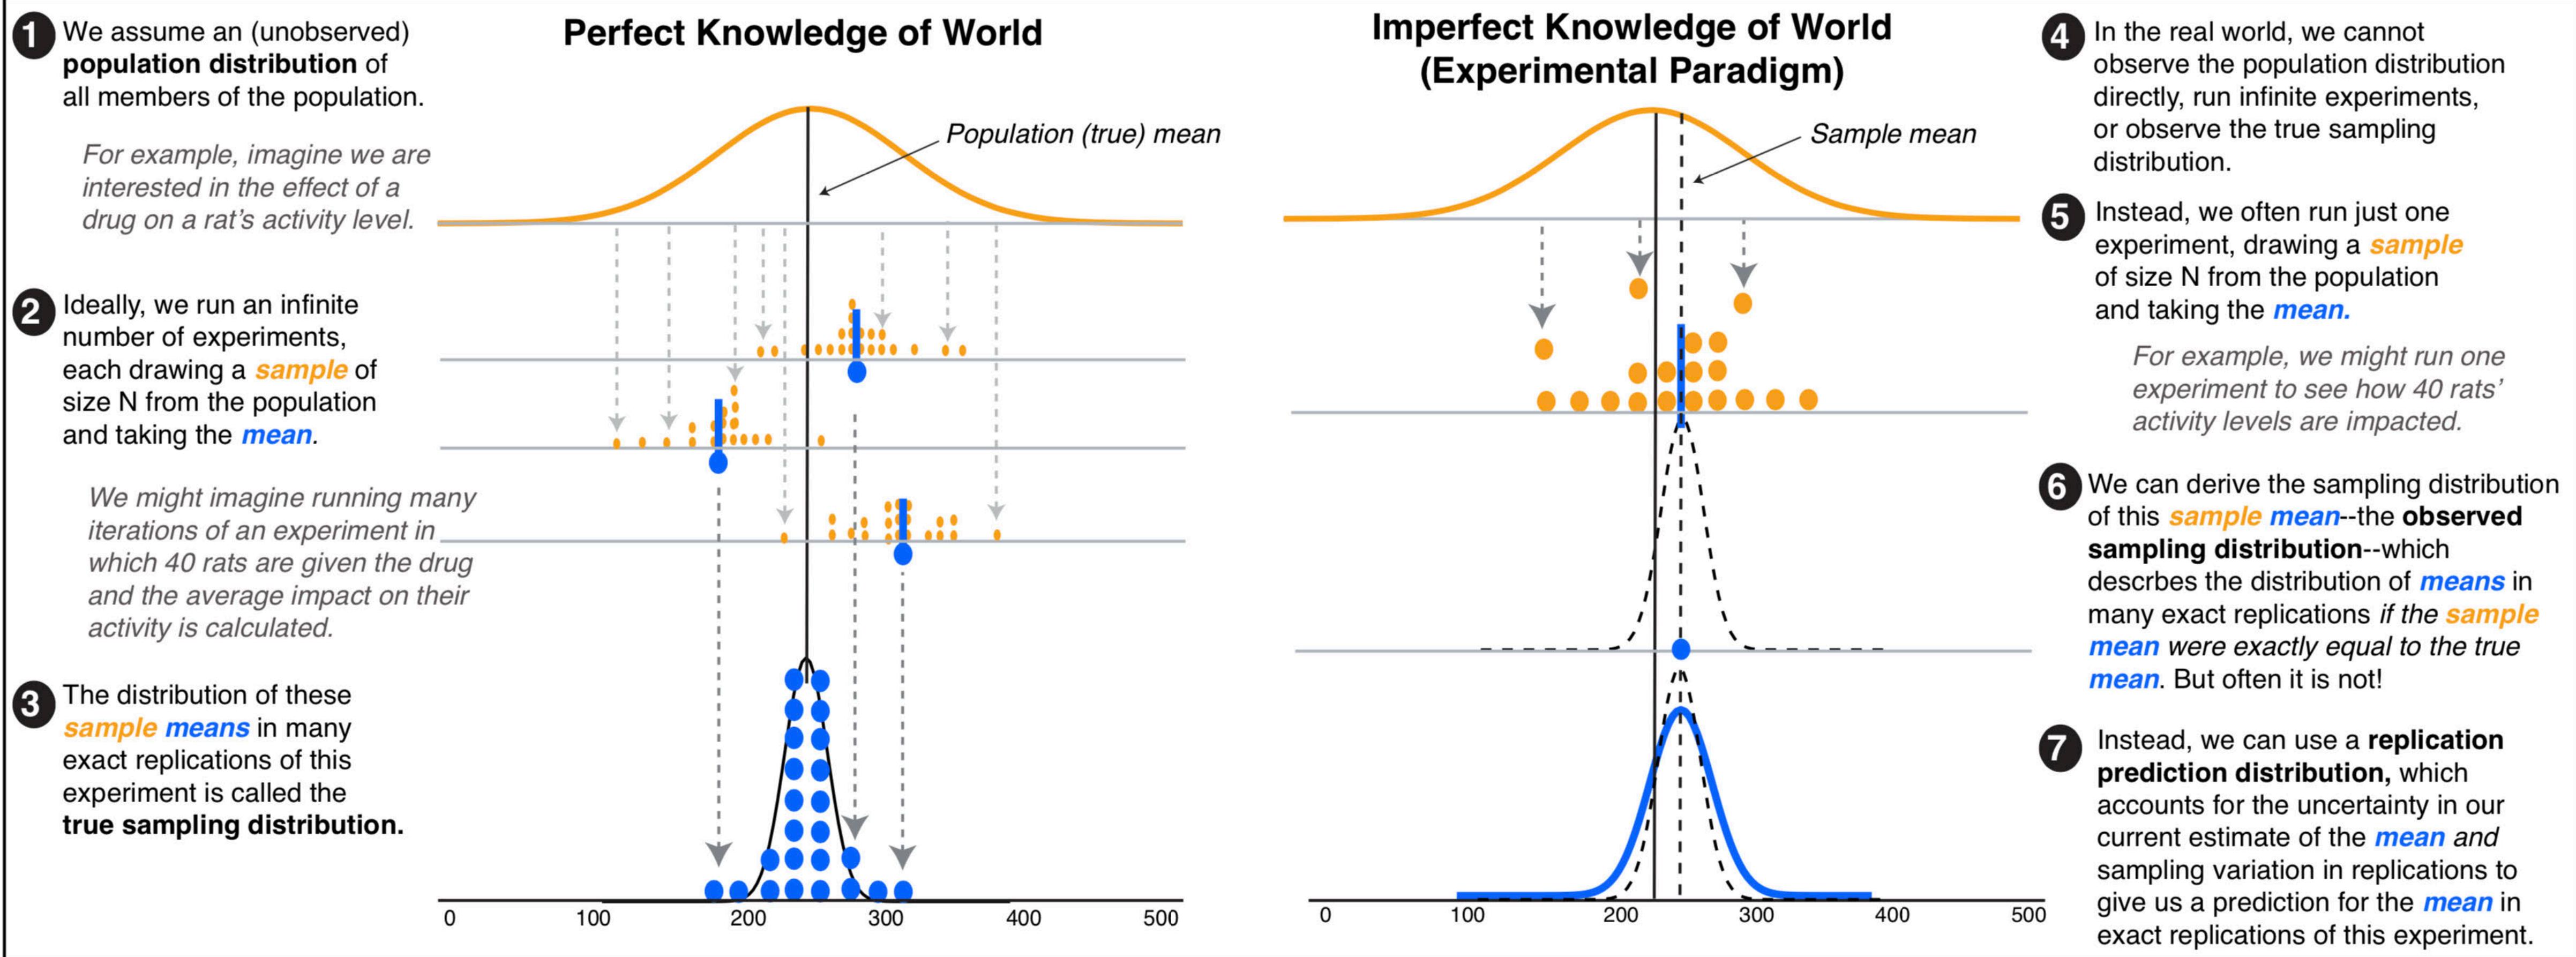

Fig. 2. A depiction of distributions relevant to replication uncertainty, including those based on perfect knowledge of the world (left) and those derived from samples obtained in experimentation (right).

Information graphics

Too broad, generic

infographic n. a visual image such as a chart or diagram used to represent information or data in an easily understandable form.

2017 PITCHER HEATMAPS

by Jacob Olsufka

2017 PITCHER HEATMAPS

How to read this heatmap visual: each column is a start, each row is an inning

Runs per game

The bars across the top shows a pitcher's trend of total runs allowed over the season.
A dot represents a quality start (>= 6 innings, <= 3 ER).

Depth into game

Follow the depth of the bars across the bottom to see the trend of how far into a game a pitcher goes.

Runs per inning

See which innings pitchers gave up the most total runs with the bars to the right.

Individual innings

The heatmap shows each inning during a pitcher's season, and when they gave up their runs colored by intensity.

INDICATES LEAGUE
LEADER

THE CY YOUNGS

MAX SCHERZER

16-6 2.51 ERA 0.90 WHIP 268 SO 22 QS

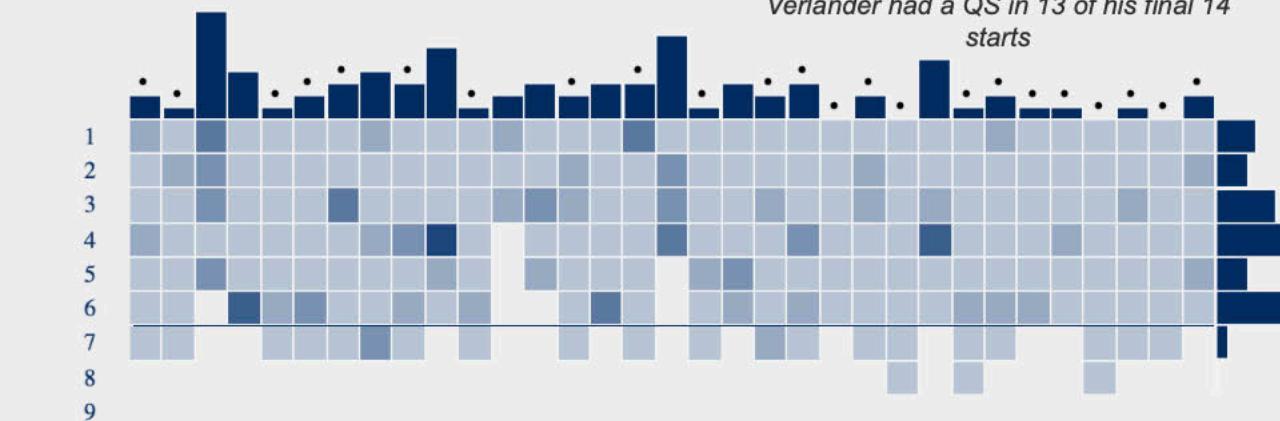

Scherzer led the league with a .178 batting avg against

JUSTIN VERLANDER

15-8 3.36 ERA 1.17 WHIP 219 SO 23 QS

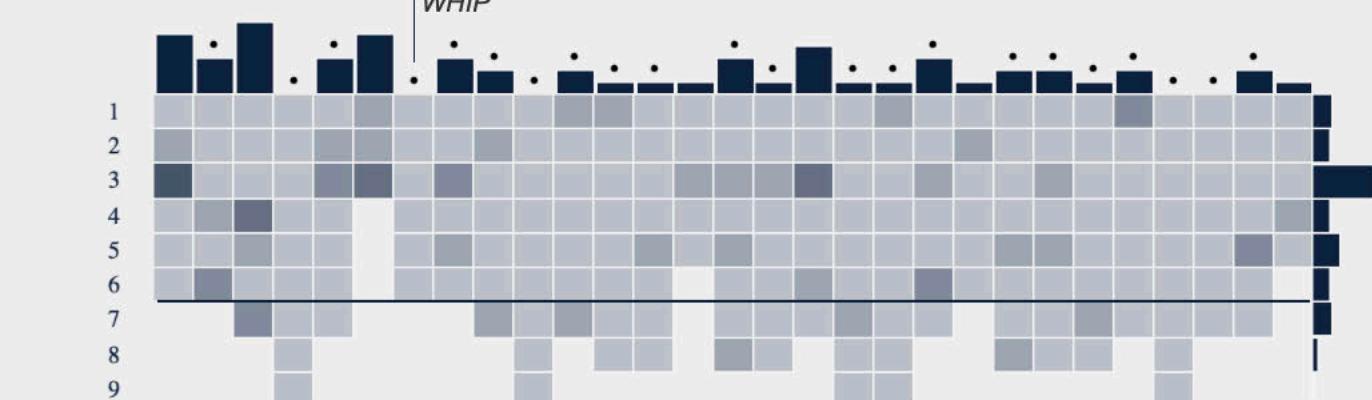

Verlander had a QS in 13 of his final 14 starts

COREY KLUBER

18-4 2.25 ERA 0.87 WHIP 265 SO 22 QS

From June on, Kluber had a 1.62 ERA and 0.76 WHIP

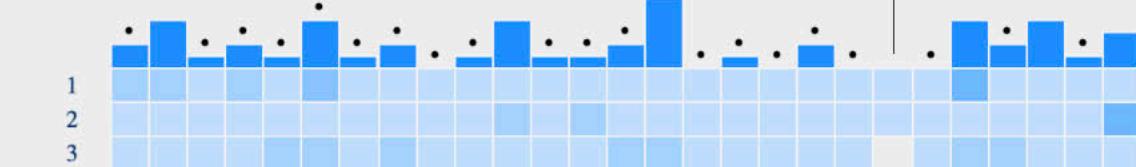

THE 'MAYBE COULD HAVE WON' THE CY YOUNGS

CLAYTON KERSHAW

18-4 2.31 ERA 0.95 WHIP 202 SO 20 QS

Kershaw left with a back injury

CHRIS SALE

17-8 2.90 ERA 0.97 WHIP 308 SO 23 QS

Sale had the most Ks in the AL since 1999

**Without a narrative,
it's just trivia, list of facts:**

Data-Driven Storytelling

Riche, co-editors

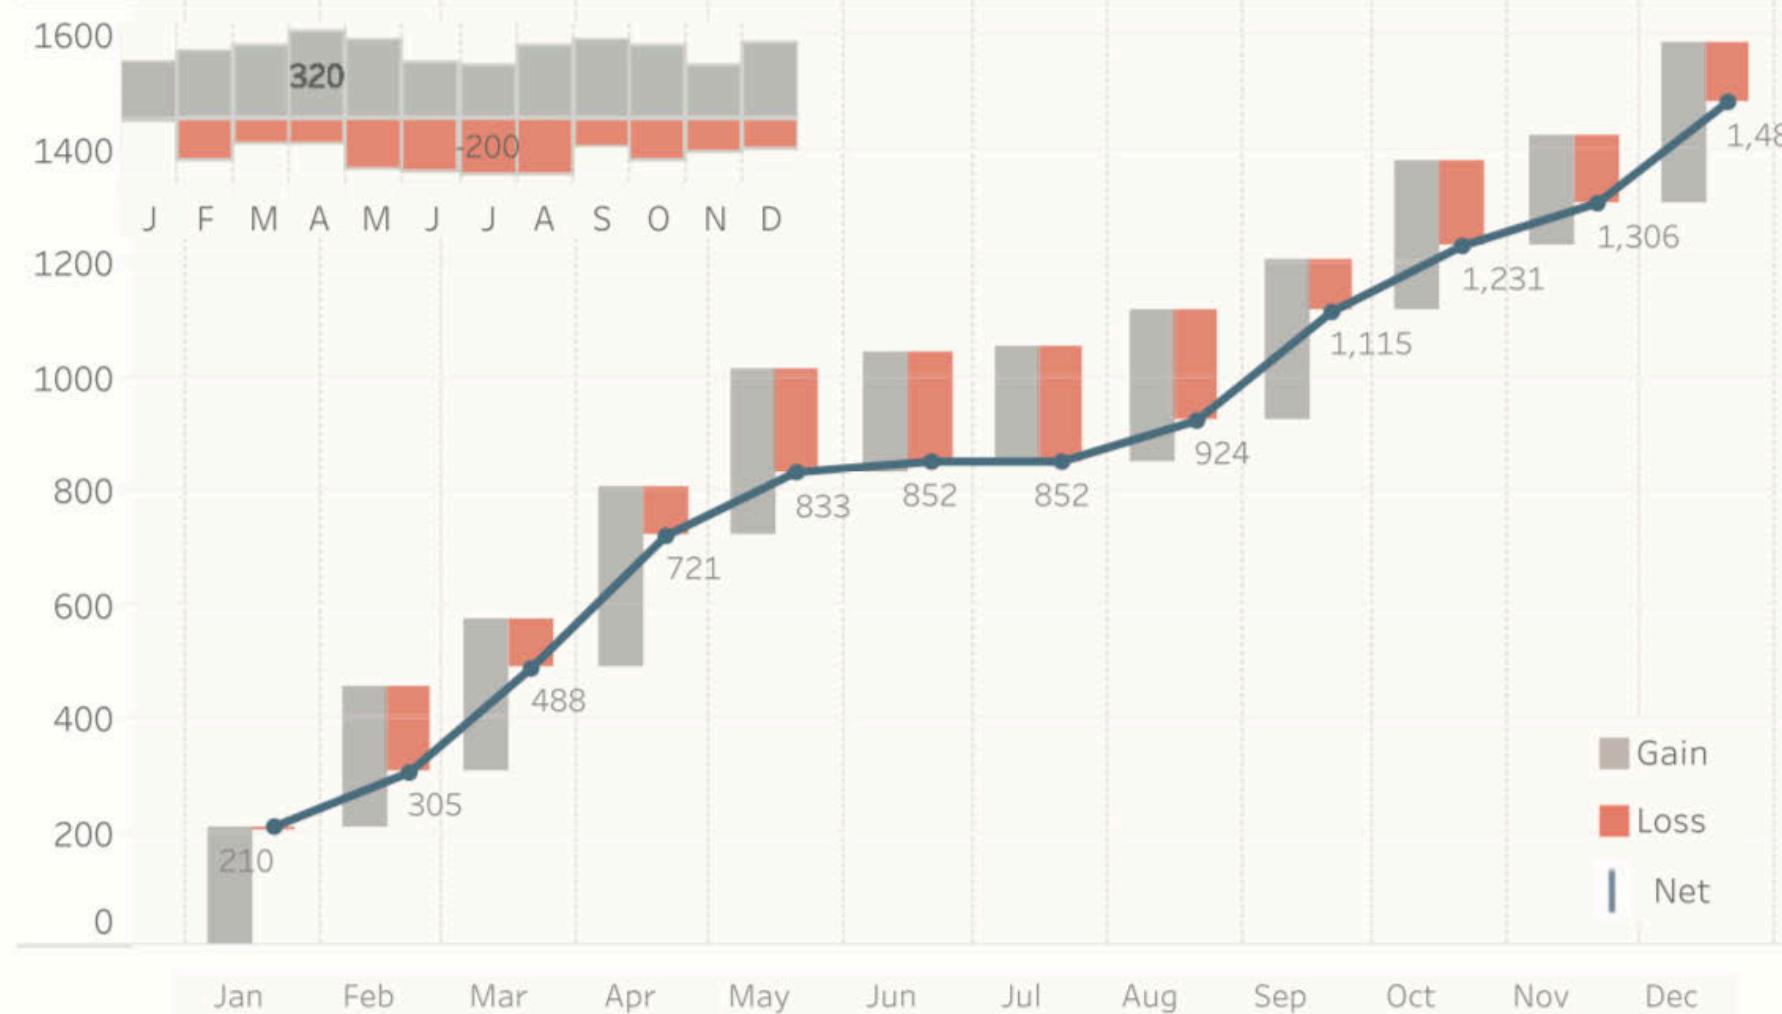

The editors are researchers and professors with focuses on human-computer interaction and information visualization.

“ We differentiated ... “**list of fact**” infographics from the infographics medium as a whole, and chose to **exclude them** because this specific submedium **lacks authorial narrative**. ”

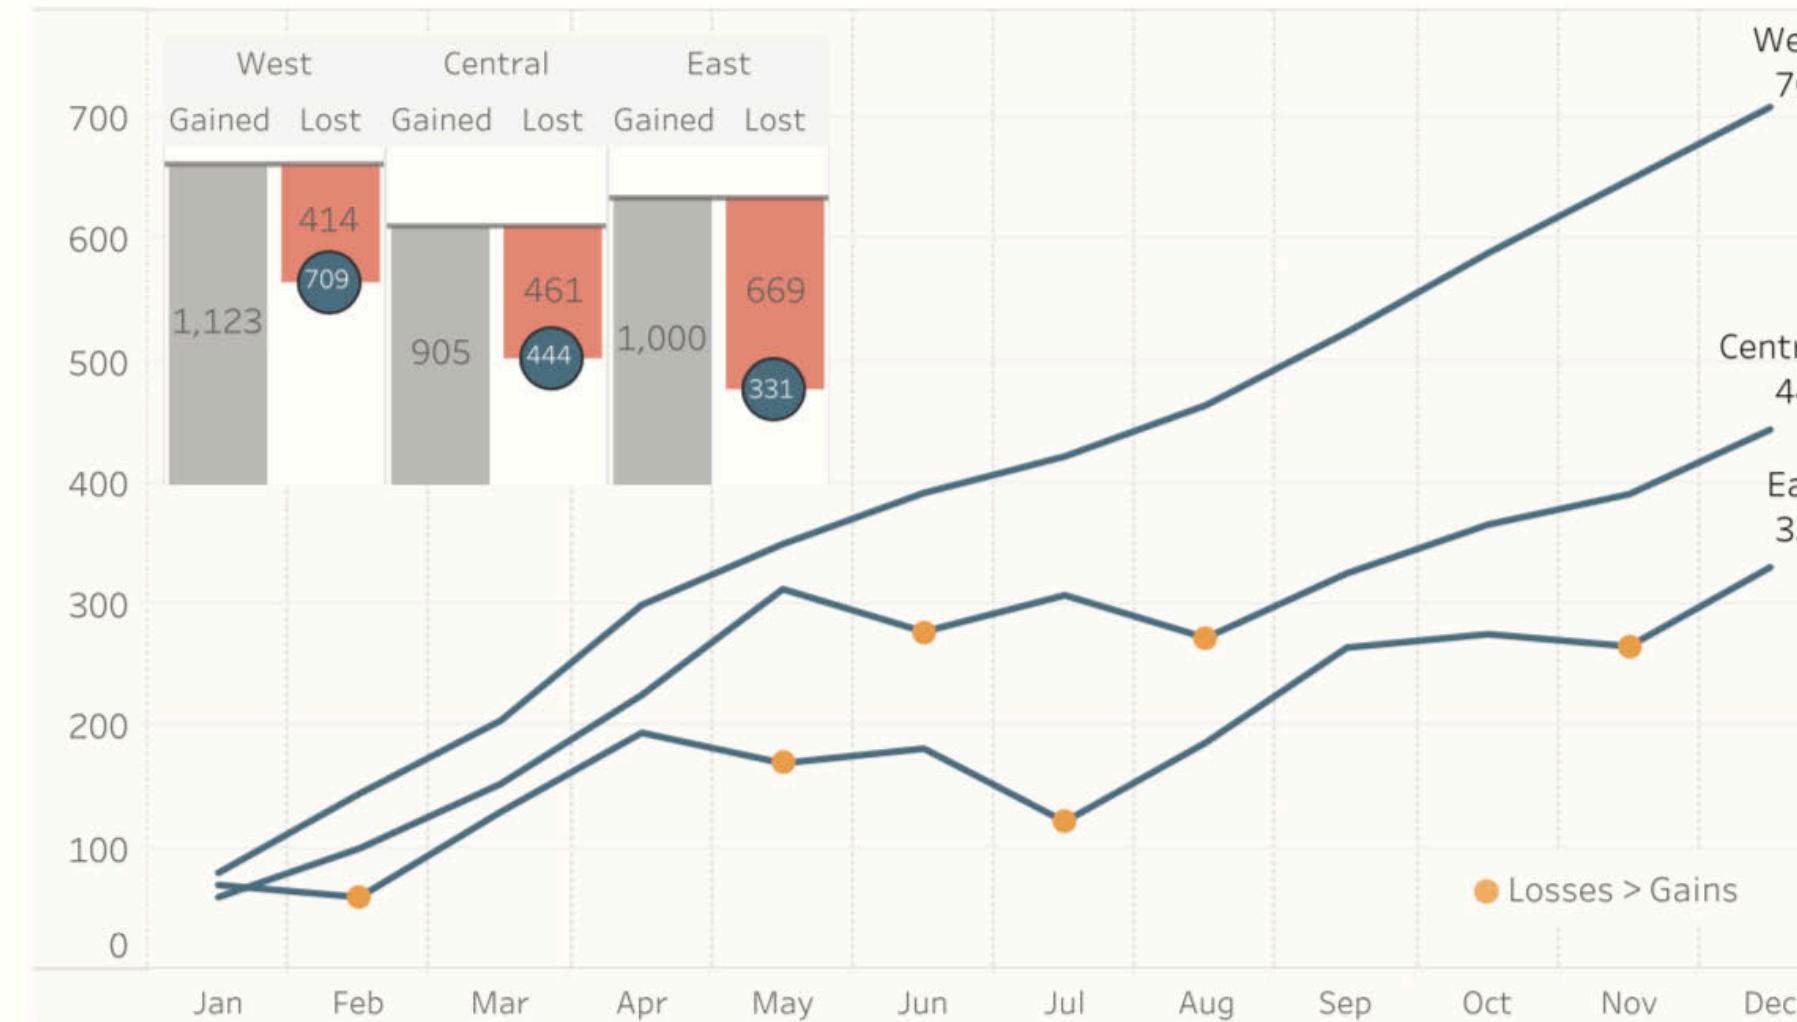

Dashboards, while sometimes a part of an infographic, may lack narrative or story on their own.

Malofiej—Infographics World Summit

“The Pulitzer Prizes
of Infographics”

Interviews of Malofiej speakers on infographics

Gregor Aisch

Infographics is an abbreviated form of “information graphics”. It seems to mean a lot of different things to different people. I rarely use the term.

Federica Fragapane

A visual translation of data and information: a language to communicate topics, contents and **stories** to people.

Laris Karklis

Infographics is . . . using visuals **to tell a story**.

Nadieh Bremer

Infographics ... combine graphical elements, such as a drawn portion of an animal, human, map, etc. with small mini **data visualizations** (a small bar chart for example) and **annotations** **to tell a story**.

We want information graphics to ...

Tell a complete story where the purpose is to inform, entertain or persuade the audience. It should:

simple, focused messages

new, surprising information

credible data sources

visually coherent, integrated

use comparisons for context, meaning

principles of information design, organized

Information is Beautiful

McCandless

Founder of Information is Beautiful, David is a writer, designer, creative director and artist.

What Makes a Good Visualization?

explicit (implicit)

Information graphics, examples for discussion

Figurative Map of the successive losses in men of the French Army in the Russian Campaign 1812-1813.

Drawn up by M. Minard, Inspector General of Bridges and Roads in retirement.

Paris, November 20, 1869.

The numbers of men present are represented by the widths of the colored zones at a rate of one millimeter for every ten thousand men; they are further written across the zones. The red designates the men who enter into Russia, the black those who leave it. — The information which has served to draw up the map has been extracted from the works of M.M. Thiers, of Séguir, of Fezensac, of Chambray and the unpublished diary of Jacob, pharmacist of the Army since October 28th. In order to better judge with the eye the diminution of the army, I have assumed that the troops of Prince Jérôme and of Marshal Davout who had been detached at Minsk and Moghilev and have rejoined around Orsha and Vitebsk, had always marched with the army.

HOW THE 1812 PATRIOTIC WAR TURNED NAPOLEON'S GRAND ARMY INTO A HANDFUL OF SURVIVORS

PYC ENG

Nobels no degrees

This visualization explores Nobel Prizes and graduate qualifications from 1901 to 1912, by analysing the age of recipients at the time prizes were awarded, average age evolution through time and among categories, graduation grades, main university affiliations and the principal hometowns of the graduates.

How to read it?

Each dot represents a Nobel laureate, each recipient is positioned according to the year the prize was awarded (x axis) and age of the person at the time of the award (y axis).

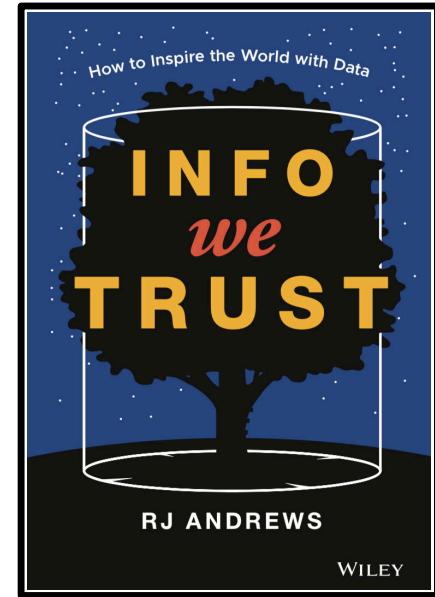

Winner, Information is Beautiful Award

Lupi, Fragapane

The co-authors work together at Lupi's design firm, whom we've previously met when considering this visualization.

The visualization has been designed and produced by Accurat (www.accurat.it), and was originally published in Italian on La Lettura the sunday cultural supplement of Corriere della Sera.

The Cost of Mobile Ads on 50 News Websites

By GREGOR AISCH, WILSON ANDREWS and JOSH KELLER OCT. 1, 2015

Ad blockers, which Apple first allowed on the iPhone in September, promise to conserve data and make websites load faster. But how much of your mobile data comes from advertising? We measured the mix of **advertising** and **editorial** on the mobile home pages of the top 50 news websites – including ours – and found that **more than half of all data came from ads** and other content filtered by ad blockers. Not all of the news websites were equal. [RELATED ARTICLE](#)

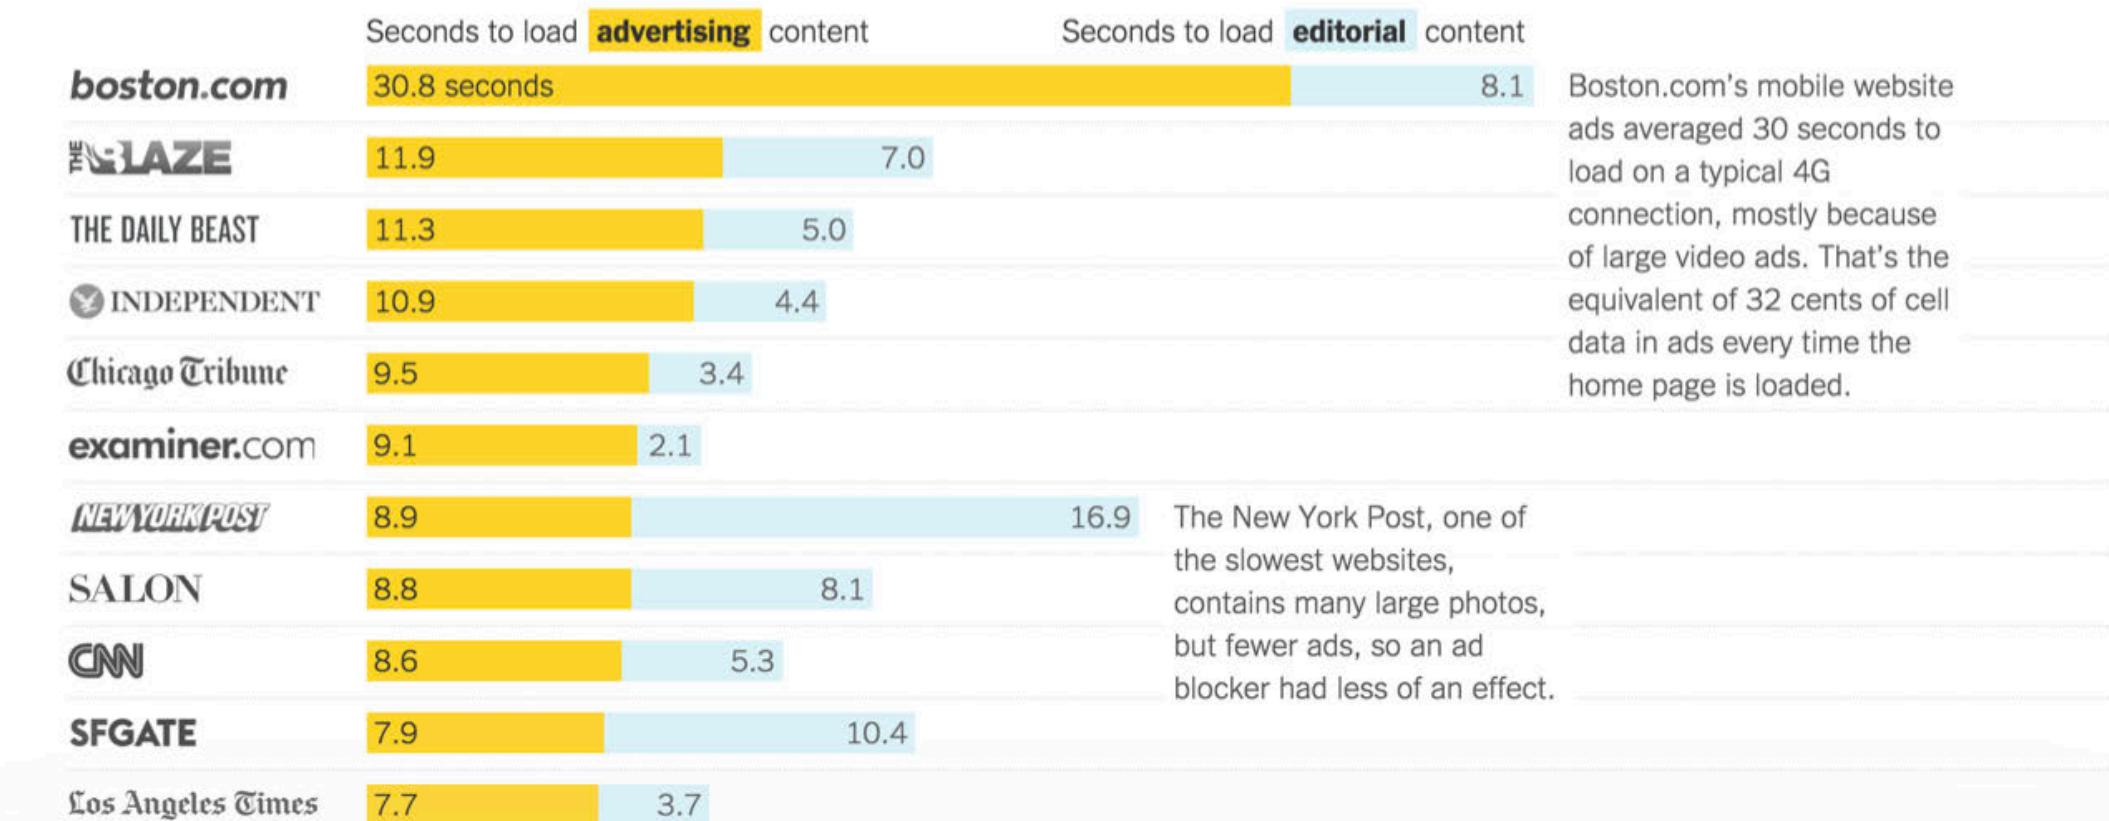

Estimated load time on a 4G LTE network	Data usage to load mobile home page	Cost per page on a typical data plan
--	--	---

Graphics portfolio, NYT Infographic

Aisch

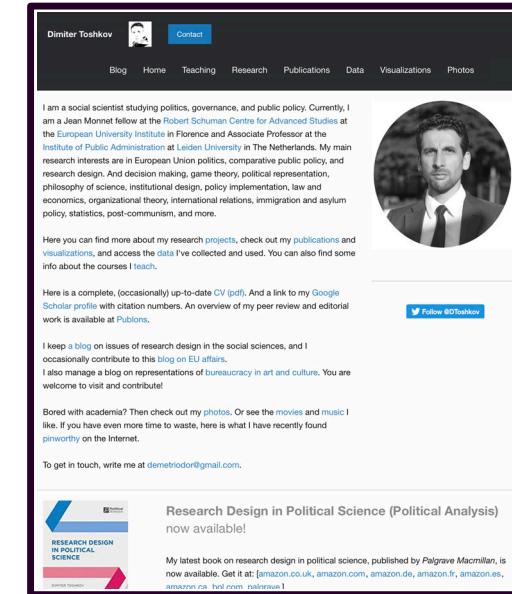

Gregor was graphics editor at the NY Times, and recipient of infographics awards at Malofiej.

Boston.com's mobile website ads averaged 30 seconds to load on a typical 4G connection, mostly because of large video ads. That's the equivalent of 32 cents of cell data in ads every time the home page is loaded.

The New York Post, one of the slowest websites, contains many large photos, but fewer ads, so an ad blocker had less of an effect.

Winner, Information is Beautiful Award

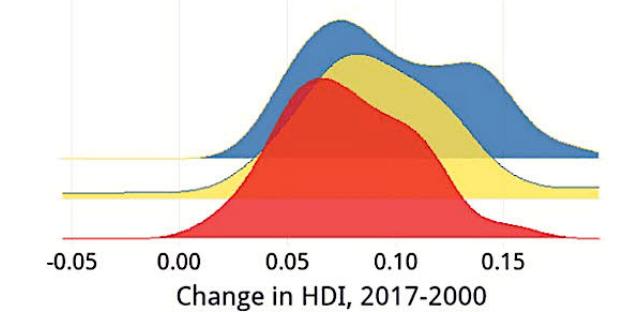

Toshkov

Associate Professor at the Institute of Public Administration, won an award for this infographic, which was made using R.

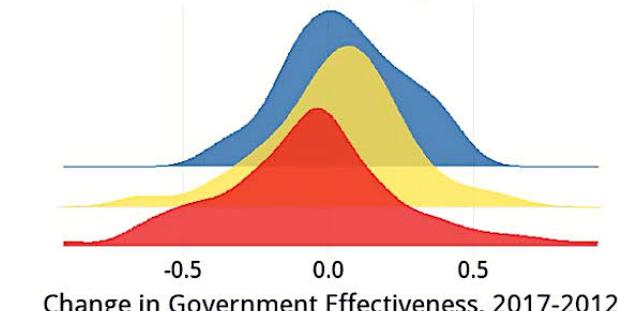

Small States Can Be Big Players in Development and Good Governance

But small states have improved less

and have even lost some ground.

WORLD DATA VISUALIZATION PRIZE

CBO

Even the Congressional Budget Office relies on infographics to convey large tomes of information in summary form.

Summary of long term budget report

Congressional Budget Office

The 2012 Long-Term Budget Outlook

June 2012

CBO's long-term projections reflect two broad scenarios:

EB

CBO's Extended Baseline Scenario

Reflects the assumption that current laws generally remain unchanged, implying that lawmakers will allow tax increases and spending cuts scheduled under current law to occur and that they will forgo measures routinely taken in the past to avoid such changes. Noninterest spending continues to rise, however, pushed up by the aging of the population and the rising costs of health care, and revenues reach historically high levels.

EAF

CBO's Extended Alternative Fiscal Scenario

Maintains what might be deemed current policies, as opposed to current laws, implying that lawmakers will extend most tax cuts and other forms of tax relief currently in place but set to expire and that they will prevent automatic spending reductions and certain spending restraints from occurring. Therefore, revenues remain near their historical average, and the gap between noninterest spending and revenues widens over the long term.

Federal Debt Held by the Public, Historically and Projected Under Two Policy Scenarios

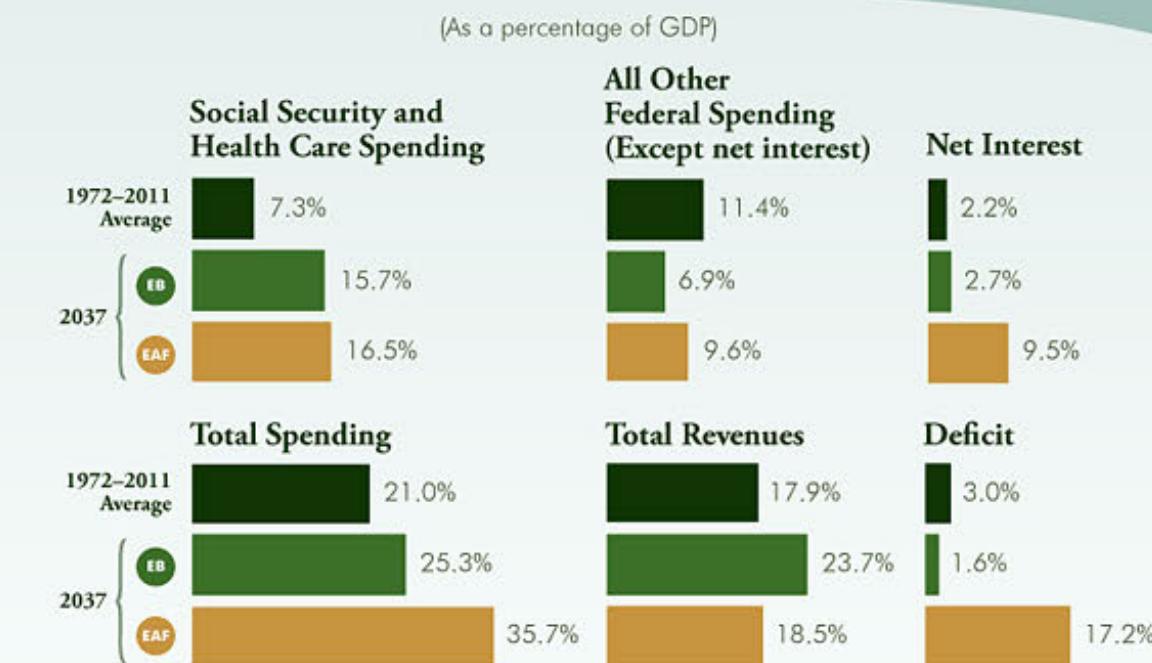

Extended Baseline Scenario EB

Extended Alternative Fiscal Scenario EAF

TOP 2000 ❤️ 70's & 80's

Since 1999 the 2000 most popular songs of all time, as voted by the show's audience, are played on Dutch national Radio 2 in a yearly marathon. The 2000 songs are on the air between noon on December 25th until New Year's Eve and over half of the Dutch population listens to the Top 2000 each year.

Each ● to the right represents a song in the Top 2000. It is placed according to its year of release. In the legend below you can see what the size and color of a song means.

The bulk of the songs and most of the top 10 are from the 70's & 80's...

Golden oldie
The oldest song in the list, Billie Holiday's *Strange Fruit*, is from 1939. It's 17 years older than the second-oldest song. If it will make the 2017 edition remains to be seen, it's barely in now, on position 189.

Year of release

The Beatles
No other artist or band has more songs in the Top 2000 as the Beatles. With 38 songs they are responsible for 14% of all titles before 1970. Nonetheless, only 5 years ago they still had 50 songs in the list.

Spread across release years of the 2000 songs
For 4 editions of the Top 2000

Created by Nadieh Bremer | VisualCinnamon.com for the December edition of data sketch|es

Visit tinyurl.com/2016top2000 for the interactive visual and see the name & title of each song

But they're losing tracks to the new Millennium

It makes sense that the Top 2000 will be more spread out for each new edition, since there are more songs to choose from. However, if we compare the distributions of the Top 2000 songs over 4 editions, we see that, especially, the 90's has been gaining a lot of popularity.

Even though all songs from the 90's were out in the 2000 edition, only a few songs from that decade were chosen. Whereas in the 2016 edition the number of songs from the 90's has risen significantly. This could be due to a new generation who has grown up during the 90's taking over from those who voted in the early 2000's (who apparently didn't appreciate the new music).

Data | Top 2000 list from Radio 2 | Top 40 info from Mediamarkt's Top 40

OBJECT LESSONS

FRAMES OF MIND

'The artist is a receptacle for emotions that come from all over the place: from the sky, from the earth, from a scrap of paper, from a passing shape, from a spider's web.'

Picasso drew inspiration from mythology, from war, from those who surrounded him, even—he proclaimed—from spiderwebs. The result is tens of thousands of works that seem to touch on countless topics. But many of the subjects that fascinated him, including death and sexuality, repeatedly surface in his art throughout the decades. Those recurring themes are grouped in a sampling of some 8,000 of Picasso's works, artistically rendered here. They can be found in portraits that radically blur the line between subject and painter, and in an array of arresting symbols such as the Minotaur, bottle, and harlequin.

PICASSO BY THEME
Each of the 12 themes below is further divided into artistic subcategories, some of which include the titles of individual works. The size of each category reflects the number of artworks on a given theme.

GRAPHIC AND ART (OIL ON CANVAS, 36x60 INCHES): ALBERTO LUCAS LÓPEZ, NGM STAFF. TEXT: EVE CONANT, NGM STAFF. PHOTO (PAINTING): MARK THIESSEN, NGM STAFF.

Longlisted, Information is Beautiful Awards

Spencer

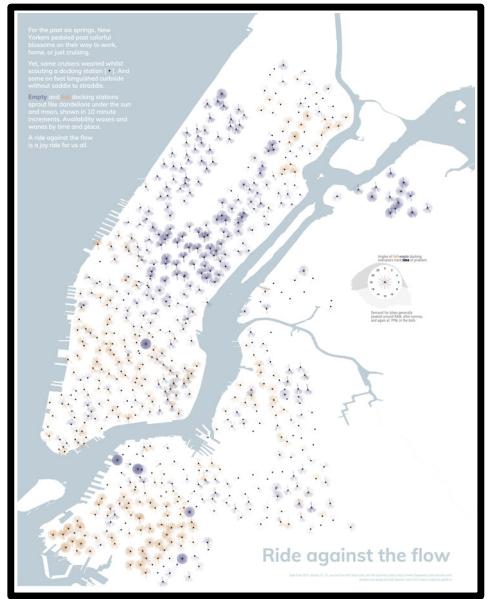

For the past six springs, New Yorkers pedaled past colorful blossoms on their way to work, home, or just cruising.

Yet, some cruisers wearied whilst scouting a docking station [•]. And some on foot languished curbside without saddle to straddle.

Empty and **full** docking stations sprout like dandelions under the sun and moon, shown in 10 minute increments. Availability waxes and wanes by time and place.

A ride against the flow is a joy ride for us all.

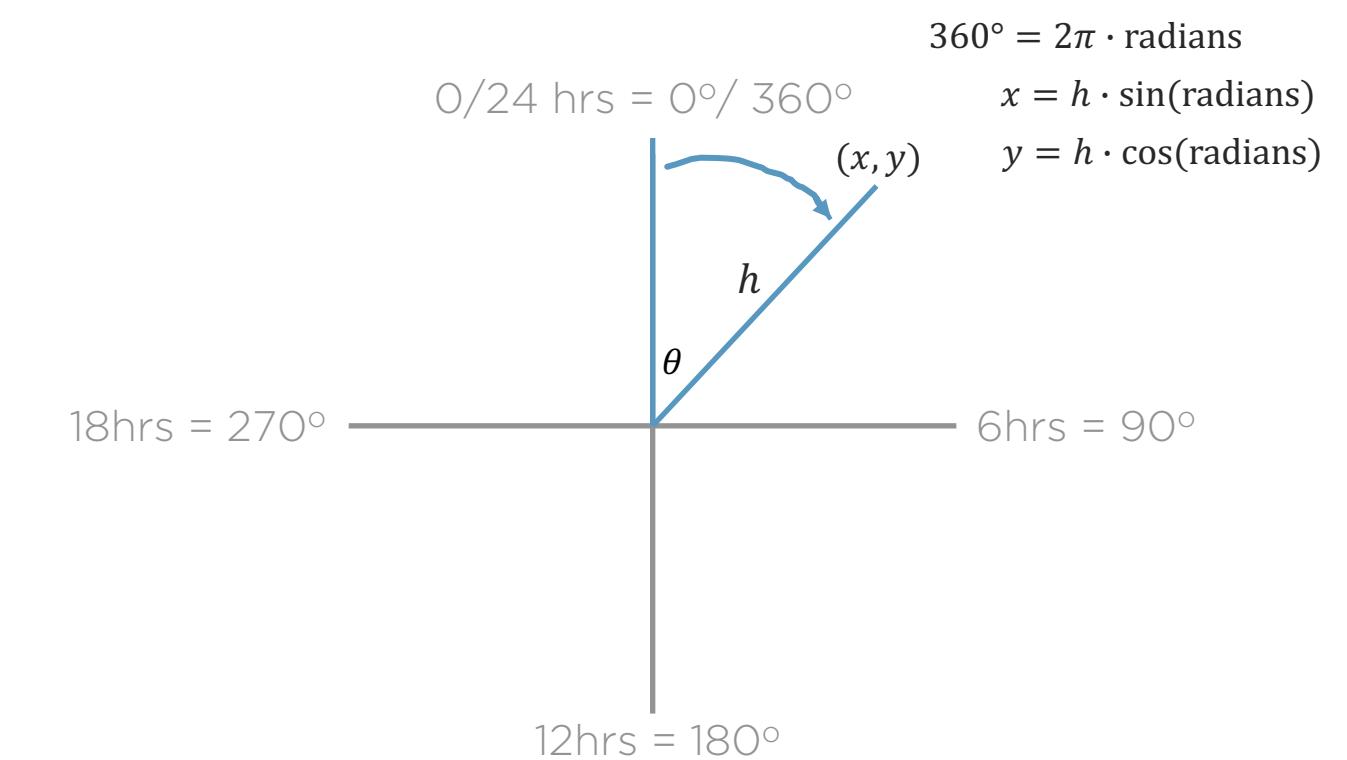

Longlisted, Information is Beautiful Awards

Spencer

Maths to create data encodings at each dock station

Basic math can help when making custom graphics. An excellent, very short reference on basic algebra, geometry, trigonometry: [Simmons, George F. *Precalculus Mathematics in a Nutshell*.](#) Barnes & Noble Books, 1987. Print.

Opacity is the lack of transparency. Opacity was lowered so that a single unavailable bike or full station would not be very noticeable but several markings at that time (on different days) would increase opacity, making the marking brighter and thus increase its visual importance.

Let's look ahead

For Next Week, Module 10:

Agenda next week

The minimum

Next deliverable, *draft* information graphic
